

ABSTRACT OF THE DISCLOSURE

5 A facsimile system includes a facsimile machine reading
image data from an original, a computer transmitting to and
receiving from the facsimile machine data of addressee
identification information indicative of at least a name of
addressee and a facsimile number corresponding to the name of
addressee, a computer-side storage circuit provided at a
computer side for storing the data of addressee identification
information, a computer-side referring circuit provided at the
10 computer side for referring to the data of addressee
identification information stored in the computer-side storage
circuit, and an instruction circuit provided in the facsimile
machine so as to be instructed at a facsimile machine side to
refer via the computer-side referring circuit to the data of
15 addressee identification information stored in the computer-
side storage circuit.
